History. Otolaryngologists (ear, nose, throat and head and neck surgeons) perform microsurgery on structures of the inner ear and the vocal cords. Otolaryngologists and maxillofacial surgeons use microsurgical techniques when reconstructing defects from resection of head and neck cancers. Cataract surgery, corneal transplants,...

### **Microsurgery - Wikipedia**

The improvement in microsurgical techniques and the better understanding of anatomy has favoured the use of free tissue transfer as the most common reconstruction in breast and head and neck cancer patients. Problems with the microanastomosis patency are the most common cause of failure of free flaps.
