Probability Jim Pitman

The book covers all basic topics and provides a fair introduction to measure-theory based probability theory (without heavy dose of measure theory). However, when it gets to more advanced topics, like the chapters on the central limit theorems and martingales, the text is less lucid and full of typos and mistakes.

Probability. Jim Pitman is a Professor in the Departments of Statistics and Mathematics in the University of California at Berkeley, USA.

Probability | Jim Pitman | Springer

Probability. The book is organized so a student can learn the fundamental ideas of probability from the first three chapters without reliance on calculus. Later chapters develop these ideas further using calculus tools. The book contains more than the usual number of examples worked out in detail.

Solution for exercise 1.4.9 in Pitman Question a) In scheme A all 1000 students have the same probability ($\frac{1}{1000}$) of being chosen. In scheme B the probability of being chosen depends on the school. A student from the first school will be chosen with probability $\frac{1}{300}$, from the second with probability $\frac{1}{1200}$, and from the third with probability $\frac{1}{1500}$
