Low vision can occur at any stage in life, but it primarily affects the elderly. Most people develop low vision as a result of eye conditions and diseases, including macular degeneration, diabetic retinopathy, glaucoma, cataracts, retinitis pigmentosa, and stroke. Some causes of low vision, such as cataracts, are treatable and good vision can be restored.

Living With Low Vision. Use night lights, a flashlight, or hall or room lighting if you get up in the night. Avoid moving quickly from a dark room to a lighted area, and vice versa; allow your eyes time to adjust to changing light levels. Use an e-reader so you can adjust the font size, lighting level, and contrast.
