You need an Air Doctor Call (702) 243-4000. There is water dripping or running out over my window or a place it never has before.

Split Air Conditioning System, How to Diagnose and Repair ...

A split air conditioner consists of two main parts: the outdoor unit and the indoor unit. The outdoor unit is installed on or near the wall outside of the room or space that you wish to cool. The unit houses the compressor, condenser coil and the expansion coil or capillary tubing.

What is a Split Air Conditioner System? - Networx

A split air conditioner is composed of two separate units, a condensing unit and an evaporative coil (known as a "condenser," and a "coil" respectively in short-hand or slang). It is from these two separate units that a split air conditioner gets its name. These units are joined by a set of copper tubing known as a "line-set," which transfers refrigerant from one unit to another.

What is a Split Air Conditioner? Split vs Packaged AC Units

To clean a split air conditioner, place an aircon bag, which can be purchased online, around the bottom part of the AC to catch runoff. Once in position, you can spray coil cleaning spray onto the cooling fins' surface, rotary blades, and coils.

The Easiest Way to Clean Split Air Conditioners - wikiHow

Air Conditioner Maintenance - Check The Condenser. In a typical air conditioner, the condensing unit is usually located outside your house where the compressor, fan and the condensing coils are located. When cooling your house, this unit rejects heat to the surrounding by blowing the fan over the

condensing coils.

Air Conditioner Maintenance Guide

Ductless A/C units don't need full-sized air ducts to work. A conventional central A/C system generates cold air at a single point and distributes it via large ducts throughout the home. A ductless air conditioner, on the other hand, uses an individual fan and evaporator unit for each room.
