W11 Valuing the environment: methods. is the maximum amount of money an individual would give up in exchange for all the benefits associated with an environmental resource. We can think of WTP as the area under an individual's demand curve as an individual would be willing to pay an amount equal to the total benefits received from the environmental good.

### **W11 Valuing the environment: methods Flashcards | Quizlet**

Over-exploitation of environment and natural resources is becoming increasingly widespread in the modern world. To combat this, environmental economists have attempted to value such resources in order to ensure that they are given due recognition in any ex ante appraisal, or ex post evaluation of projects or policies; and also to ensure that optimal levels of consumption are determined for the ...
